

SUNSHOWER

HEALTH & WELLNESS

FEEL GOOD,
LOOK GOOD

HEALTHY LIVING AND WELLNESS

Do you love that feeling you get when the first rays of springtime sun appear? You want to just throw open the doors and enjoy the heat of the sun. The warmth of the springtime sun gives you new energy and immediately cheers you up. Well, Sunshower has exactly the same effects! Thanks to Sunshower, you can have sun-kissed summery skin and heaps of positive energy all year round. Sunshower is designed to help people combine a healthy lifestyle with all-round wellness.

SUNSHOWER BOOSTS YOUR RESISTANCE

A lot of people suffer from flu, colds and the winter blues due to a lack of vitamin D.

Research has shown that these health complaints are easily avoidable – all it takes is regular, yet moderate, use of Sunshower. Sunshower emits a well-balanced dose of artificial sunlight while you shower, reaping plenty of benefits: a healthy, sun-kissed glow, a boost in vitamin D production and an energised, fit feeling. Isn't that what everybody wants?

SUNSHOWER COMBI

Sunshower Combi not only emits artificial sunlight, it also has infrared lamps that give off pleasant, deep-reaching heat.

These red lamps have healing effects on your muscles and joints. Infrared is also known for boosting circulation, which helps to prevent injuries. What better way to relax after sports or a long walk than to bask in infrared heat in your own bathroom?

Corner unit 28 cm each wall

SUNSHOWER

HEALTH AND TECHNOLOGY

FACTS ABOUT SUNLIGHT & SUNSHOWER

The light emitted by Sunshower has the same effects as natural sunlight, and the main positive effect of sunlight is that it makes the body produce vitamin D naturally. Burning due to excessive sun exposure is the main risk.

Sunlight for producing vitamin D

Vitamin D boosts your resistance, strengthens your bones and makes you a feel fit. For this reason, doctors recommend that people spend 15 minutes outside in the sun each day. Many people suffer from vitamin D deficiency in winter due to a lack of sun exposure. This leads to a drop in resistance and increases the likelihood of colds, flu or the winter blues. Research has shown that regularly using Sunshower for short periods in the winter months can ensure that vitamin D levels remain as high as in summer i.e., at the levels recommended for good health.

Balanced dose of sunlight

Too much sunlight is bad for your health, and so is too little sunlight. Doctors generally recommend that people take the sun regularly and in small doses. Sunshower emits a well-balanced dose of UV light, less than the sun gives off at noon in summer. The chance of burning in eight minutes is therefore very small. By combining sunbathing with your daily shower, you save time and reduce your risk of sunburn. Research has shown that

using Sunshower for short periods on a regular basis can darken the skin slightly without burning. Sunshower is the responsible way to get a healthy, summery glow.

FACTS ABOUT INFRARED & SUNSHOWER

Sunshower uses IR lamps with a full IR spectrum, the optimum of the lamps is in the short waves area. These IR rays have a deep reach, penetrating the skin to a depth of up to 5 mm. This warms the body optimally and efficiently. Harmful materials are expelled more quickly, blood vessels expand and the muscles become more flexible so as to improve performance.

These IR lamps were designed to focus on the neck, back and shoulders. The lamps reach their full heat capacity very quickly after being switched on, so little time or energy is wasted. The maximum length of a session with the IR lamps is less than ten minutes, so the chances of the body overheating are very low. Besides, this is enough time for you to benefit from the relaxing and restorative effects of infrared during and after showering.

Disclaimer. Sunshower's liability is limited to defects in manufacture or design. Sunshower cannot be held responsible for the consequences of careless usage of this product or for the consequences of a violation of local regulations. Follow instructions. Avoid overexposure and wear protective eyewear. As with natural sunlight, overexposure can cause eye and skin injury and allergic reactions. Medications or cosmetics may increase your sensitivity to the ultraviolet radiation. Consult physician before using sunlamp if you are using medications or have a history of skin problems or believe yourself especially sensitive to sunlight. If you do not tan in the sun, you are unlikely to tan from the use of this product.
